

# Accumulating Snow Possible Tuesday Night and Wednesday Morning

- Low pressure will develop offshore the FL/GA coast **Tuesday afternoon** then track NE offshore the Carolina coast early **Wednesday**
- **Precipitation will fall as all snow** in central NC due to the offshore track of the surface low and the arctic airmass in place
- Expect a **sharp cut-off** in precipitation somewhere **near the Highway 1 corridor** in central NC, including the Triangle
- The **precise track of the surface low** and location of the **precipitation “cut-off”** line remain **uncertain**
- A low track **closer to the coast** will result in a **higher chance of accumulating snow** along Highway 1 (i.e. Triangle area)
- A low track **further offshore** will result in a **lower chance of accumulating snow** along Highway 1 (i.e. Triangle area)
- **Significant snow accumulation (2-4”+)** will be possible, **especially east of Interstate 95 and south of Highway 64**
- **A winter storm watch** may be needed for portions of central NC Tuesday afternoon and Wednesday morning, primarily south and east of the Triangle

**Briefing Valid  
as of 500 pm  
EST Sunday  
January 26**
